

L^AT_EX Class for the *Association for Computing Machinery**

Boris Veytsman[†]

2022/04/09, v1.84

Abstract

This package provides a class for typesetting publications of the Association for Computing Machinery.

Contents

1	Introduction	3
2	User's guide	3
2.1	Installation	3
2.2	Invocation and options	6
2.3	Top matter	7
2.4	Internationalization	19
2.5	Algorithms	20
2.6	Figures and tables	20
2.7	Descriptions of images	21
2.8	Theorems	22
2.9	Online-only and offline-only material	22
2.10	Note about anonymous mode	23
2.11	Acknowledgments	23
2.12	Bibliography	24
	2.12.1 Processing using Bib _T _E X	24
	2.12.2 Processing using Bib _L _A _T _E X	27
2.13	Colors	28
2.14	Other notable packages and typographic remarks	28
2.15	Counting words	29
2.16	Disabled or forbidden commands	29
2.17	Notes for wizards	29
2.18	Currently supported publications	30
2.19	A note about sigchi-a format	32

3.23	TOC lists	100
3.24	Theorems	100
3.25	Balancing columns	103
3.26	Acknowledgments	104
3.27	Conditional typesetting	105
3.28	Additional bibliography commands	105
3.29	Index	105
3.30	End of Class	106

1 Introduction

The Association for Computing Machinery¹ is the world’s largest educational and scientific computing society, which delivers resources that advance computing as a science and a profession. It was one of the early adopters of T_EX for its typesetting.

It provided several different classes for a number of journals and conference proceedings. Unfortunately during the years since these classes were written, the code was patched many times, and supporting different versions of the classes became difficult.

This package provides the uniform interface for all ACM publications. It is intended to replace all the different classes and packages and provide an up-to-date L^AT_EX package.

This package uses only free T_EX packages and fonts included in T_EXLive, MikT_EX and other popular T_EX distributions. It is intended to be published in these distributions itself, which minimizes users’ efforts in the installation and support of this package.

I am grateful to Michael D. Adams, Leif Andersen, Lawrence Christopher Angrave, Dirk Beyer, Andrew Black, Joachim Breitner, Yegor Bugayenko, Benjamin Byholm, John Collins, Roberto Di Cosmo, Nils Anders Danielsson, Michael Ekstrand, Matthew Fluet, Paolo G. Giarrusso, Ben Greenman, Enrico Gregorio, Jamie Davis, Ulrike Fischer, Jason Hemann, Peter Kemp, Luis Leiva, Ben Liblit, Rholais Lii, LianTze Lim, Kuldeep S. Meel, Kai Mindermann, Frank Mittelbach, Serguei Mokhov, Ross Moore, John Owens, Joel Nider, Scott Pakin, Tobias Pape, Henning Pohl, Philip Quinn, Mathias Rav, Andreas Reichinger, Matteo Riondato, Craig Rodkin, Bernard Rous, Feras Saad, Kerry A. Seitz, Jr., David Shamma, Gabriel Scherer, Kartik Singhal, Christoph Sommer, Stephen Spencer, Shin Hwei Tan, Daniel Thomas, Shari Trewin, Zack Weinberg, John Wickerson and many others for their invaluable help.

The development version of the package is available at <https://github.com/borisveytsman/acmart>.

2 User’s guide

This class uses many commands and customization options, so it might appear intimidating for a casual user. Do not panic! Many of these commands and options can be safely left with their default values or the values recommended by your conference or journal editors. If you have problems or questions, do not hesitate to ask me directly or the community at <https://github.com/borisveytsman/acmart>, <https://tex.stackexchange.com> or the closest T_EX Users Group. The world-wide T_EX Users Group is at <https://tug.org/>; please consider joining us if you use T_EX regularly.

2.1 Installation

Most probably, you already have this package installed in your favorite T_EX distribution; if not, you may want to upgrade. You may need to upgrade it anyway since this package uses a number of relatively recent packages, especially the ones related to fonts.

The latest released version of this package can be found on CTAN: <https://www.ctan.org/pkg/acmart>. The development version can be found on GitHub: <https://github.com/borisveytsman/acmart>. At this address you can file a bug report—or even contribute your own enhancement by making a pull request.

¹<http://www.acm.org/>

Please note that the version on Github is a development (or experimental) version: please download it for testing new features. The production version is the one on CTAN and ACM sites.

Most users should not attempt to install this package themselves but should rather rely on their \TeX distributions to provide it. If you decide to install the package yourself, follow the standard rules:

1. Run `latex acmart.ins`. This will produce the file `acmart.cls`
2. Put the files `acmart.cls` and `ACM-Reference-Format.bst` in places where \TeX can find them (see [1] or the documentation for your \TeX system).
3. Update the database of file names. Again, see [1] or the documentation for your \TeX system for the system-specific details.
4. The file `acmart.pdf` provides the documentation for the package. (This is probably the file you are reading now.)

As an alternative to items 2 and 3 you can just put the files in the working directory where your `.tex` file is.

This class uses a number of other packages. They are included in all major \TeX distributions (\TeX Live, Mac \TeX , Mik \TeX) of 2015 and later, so you probably have them installed. Just in case here is the list of these packages:

- *amscs*, <http://www.ctan.org/pkg/amscs>
- *amsfonts*, <http://www.ctan.org/pkg/amsfonts>
- *amsmath*, <http://www.ctan.org/pkg/amsmath>
- *binhex*, <http://www.ctan.org/pkg/binhex>
- *balance*, <http://www.ctan.org/pkg/balance>
- *booktabs*, <http://www.ctan.org/pkg/booktabs>
- *caption*, <http://www.ctan.org/pkg/caption>
- *comment*, <http://www.ctan.org/pkg/comment>
- *cm-super*, <http://www.ctan.org/pkg/cm-super>
- *cmap*, <http://www.ctan.org/pkg/cmap>
- *draftwatermark*, <http://www.ctan.org/pkg/draftwatermark>
- *environ*, <http://www.ctan.org/pkg/environ>
- *etoolbox*, <http://www.ctan.org/pkg/etoolbox>
- *fancyhdr*, <http://www.ctan.org/pkg/fancyhdr>
- *float*, <http://www.ctan.org/pkg/float>
- *fontaxes*, <http://www.ctan.org/pkg/fontaxes>
- *geometry*, <http://www.ctan.org/pkg/geometry>

- *graphics*, <http://www.ctan.org/pkg/graphics>
- *hyperref*, <http://www.ctan.org/pkg/hyperref>
- *hyperxmp*, <http://www.ctan.org/pkg/hyperxmp>
- *iftex*, <http://www.ctan.org/pkg/iftex>
- *inconsolata*, <http://www.ctan.org/pkg/inconsolata>
- *libertine*, <http://www.ctan.org/pkg/libertine>
- *manyfoot*, <http://www.ctan.org/pkg/manyfoot>
- *microtype*, <http://www.ctan.org/pkg/microtype>
- *mmap*, <http://www.ctan.org/pkg/mmap>
- *ms*, <http://www.ctan.org/pkg/ms>
- *mweights*, <http://www.ctan.org/pkg/mweights>
- *natbib*, <http://www.ctan.org/pkg/natbib>
- *nccfoots*, <http://www.ctan.org/pkg/nccfoots>
- *newtx*, <http://www.ctan.org/pkg/newtx>
- *oberdiek*, <http://www.ctan.org/pkg/oberdiek>
- *pdftex-def*, <http://www.ctan.org/pkg/pdftex-def>
- *refcount*, <http://www.ctan.org/pkg/refcount>
- *setspace*, <http://www.ctan.org/pkg/setspace>
- *textcase*, <http://www.ctan.org/pkg/textcase>
- *totpages*, <http://www.ctan.org/pkg/totpages>
- *trimspaces*, <http://www.ctan.org/pkg/trimspaces>
- *upquote*, <http://www.ctan.org/pkg/upquote>
- *url*, <http://www.ctan.org/pkg/url>
- *xcolor*, <http://www.ctan.org/pkg/xcolor>
- *xkeyval*, <http://www.ctan.org/pkg/xkeyval>
- *xstring*, <http://www.ctan.org/pkg/xstring>

Table 1: The possible values for the format option

Value	Meaning
manuscript	A manuscript. This is the default.
acmsmall	Small single-column format. Used for CIE, CSUR, DLT, FAC, GAMES, JACM, JDIQ, JDS, JEA, JERIC, JETC, PACMCGIT, PACMHCI, PACMPL, TAAS, TACCESS, TACO, TALG, TALLIP (formerly TALIP), TCPS, TDS, TEAC, TECS, TELO, THRI, THS, TIOT, TISSEC, TIST, TKDD, TMIS, TOCE, TOCHI, TOCL, TOCS, TOCT, TODAES, TODS, TOIS, TOIT, TOMACS, TOMM (formerly TOMCCAP), TOMPECS, TOMS, TOPC, TOPLAS, TOPS, TOS, TOSEM, TOSN, TQC, TRET, TSAS, TSC, TSLP and TWEB, including special issues.
acmlarge	Large single-column format. Used for DTRAP, HEALTH, IMWUT, JOCCH, POMACS and TAP, including special issues.
acmtog	Large double-column format. Used for TOG, including annual conference Technical Papers.
sigconf	Proceedings format for most ACM conferences (with the exceptions listed below) and all ICPS volumes.
sigplan	Proceedings format for SIGPLAN conferences.

2.2 Invocation and options

To use this class, put in the preamble of your document

```
\documentclass[options]{acmart}
```

There are several options corresponding to the type of the document and its general appearance. They are described below. Generally speaking, the options have key=value forms, for example,

```
\documentclass[format=acmsmall, screen=true, review=false]{acmart}
```

The option `format` describes the format of the output. There are several possible values for this option, for example,

```
\documentclass[format=acmtog]{acmart}
```

Actually the words `format=` can be omitted, e.g.,

```
\documentclass[acmtog, review=false]{acmart}
```

The possible formats are listed in Table 1. Note that formats starting with `acm` are intended for journals and transactions, while formats starting with `sig` are intended for proceedings published as books.

Note that sometimes conference proceedings are published as a special issue (or issues) of an ACM journal. In this case, you should use the journal format for a conference paper. Please contact your conference committee if in doubt.

Starting in 2020, ACM retired formats `sigchi` and `sigchi-a`. SIGCHI conferences now use `sigconf` format for their publications. If a file uses `sigchi` format, a warning

is issued, and the format is automatically switched to `sigconf`. Format `sigchi-a` can be used for non-ACM documents only (see Section 2.19).

There are several Boolean options that can take `true` or `false` values. They are listed in Table 2. The words `=true` can be omitted when setting a Boolean option, so instead of `screen=true` one can write just `screen`, for example,

```
\documentclass[acmsmall, screen, review]{acmart}
```

The option `review` is useful when combined with the `manuscript` format option. It provides a version suitable for reviewers and copy editors.

Two samples in the `samples` directory, `manuscript` and `acmsmall-submission`, show manuscripts formatted for submission to ACM.

The default for the option `screen` depends on the publication. At present it is `false` for all publications *but* PACM, since PACM is now electronic-only. Thus PACM titles (see Table 5) set this option to `true`. In the future this option may involve additional features suitable for on-screen versions of articles.

The option `natbib` is used when the corresponding BibTeX style is based on `natbib`. In most cases you do not need to set it. See Section 2.12.

The option `anonymous` is used for anonymous review processes and causes all author information to be obscured.

The option `timestamp` is used to include a time stamp in the footer of each page. When preparing a document, this can help avoid confusing different revisions. The footer also includes the page range of the document. This helps detect missing pages in hard copies.

The option `authordraft` is intended for author's drafts that are not intended for distribution. It typesets a copyright block to give the author an idea of its size and the overall size of the paper but overprints it with the phrase "Unpublished working draft. Not for distribution.", which is also used as a watermark. This option sets `timestamp` and `review` to `true`, but these can be overridden by setting these options to `false` *after* setting `authordraft` to `true`.

The option `balance` determines whether the last page in the two column mode has balanced columns. By default it is `true`; however, it may lead to problems for some documents. Set it to `false` if you encounter compilation errors. Note that for one page documents `\balance` command might cause problems. An alternative is the (experimental) option `pbalance`, which uses the new package `pbalance` for this end.

The option `urlbreakonhyphens` determines whether URLs can be split between lines after hyphens. By default it is `true`. Set it to `false` to disallow these breaks.

The option `language` is used to define the languages for the multi-language papers. It is discussed in Section 2.4.

2.3 Top matter

A number of commands set up *top matter* or (in computer science jargon) *metadata* for an article. They establish the publication name, article title, authors, DOI and other data. Some of these commands, like `\title` and `\author`, should be put by the authors. Others, like `\acmVolume` and `\acmDOI`—by the editors. Below we describe these commands and mention who should issue them. These macros should be used *before* the `\maketitle` command. Note that in previous versions of ACM classes some of these commands should be used before `\maketitle`, and some after it. Now they all must be used before `\maketitle`.

Table 2: Boolean options

Option	Default	Meaning
review	false	A review version: lines are numbered and hyperlinks are colored
screen	see text	A screen version: hyperlinks are colored
natbib	true	Whether to use the natbib package (see Section 2.12)
anonymous	false	Whether to make author(s) anonymous
authorversion	false	Whether to generate a special version for the authors' personal use or posting (see Section 2.3)
nonacm	false	Use the class typesetting options for a non-ACM document, which will not include the conference/journal header and footers or permission statements
timestamp	false	Whether to put a time stamp in the footer of each page
authordraft	false	Whether author's-draft mode is enabled
acmthm	true	Whether to define theorem-like environments, see Section 2.8
balance	true	Whether to balance the last page in two column mode
pbalance	false	Whether to balance the last page in two column mode using pbalance package
urlbreakonhyphens	true	Whether to break urls on hyphens

This class internally loads the `amsart` class, so many top-matter commands are inherited from `amsart` [2].

`\acmJournal` The macro `\acmJournal{<shortName>}` sets the name of the journal or transaction for journals and transactions. The argument is the short name of the publication *in uppercase*, for example,

```
\acmJournal{TOMS}
```

The currently recognized journals are listed in Table 5. Note that conference proceedings published in *book* form do not set this macro.

`\acmConference` The macro `\acmConference[<short name>]{<name>}{<date>}{<venue>}` is used for conference proceedings published in the book form. The arguments are the following:

short name: the abbreviated name of the conference (optional).

name: the name of the conference.

date: the date(s) of the conference.

venue: the place of the conference.

Examples:

```
\acmConference[TD'15]{Technical Data Conference}{November
12--16}{Dallas, TX, USA}
\acmConference{SA'15 Art Papers}{November 02--06, 2015}{Kobe, Japan}
```

`\acmBooktitle` By default we assume that conference proceedings are published in the book named *Proceedings of CONFERENCE*, where CONFERENCE is the name of the conference inferred from the command `\acmConference` above. However, sometimes the book title is different. The command `\acmBooktitle` can be used to set this title, for example,

```
\acmBooktitle{Companion to the first International Conference on the
Art, Science and Engineering of Programming (Programming '17)}
```

An ACM paper should have either `\acmJournal` or `\acmConference` command. If it has both (or more) commands, the last one takes precedence. Note that if you have the command `\acmConference` in a journal format like `acmsmall`, the class will use conference format for bibstrip and reference citation formatting. In the samples directory there is a file `sample-acmsmall-conf.tex` with the example of this usage.

`\editor` In most cases, conference proceedings are edited. You can use the command `\editor{<editor>}` to set the editor of the volume. This command can be repeated, for example,

```
\editor{Jennifer B. Sartor}
\editor{Theo D'Hondt}
\editor{Wolfgang De Meuter}
```

`\title` The command `\title`, as in the `amsart` class, has two arguments: one optional, and one mandatory:

```
\title[<ShortTitle>]{<FullTitle>}
```

The mandatory argument is the full title of the article. The optional argument, if present, defines the shorter version of the title for running heads. If the optional argument is absent, the full title is used instead.

`\subtitle` It is expected that this command is inserted by the author of the manuscript. Besides title, ACM classes allow a subtitle, set with the `\subtitle{<subtitle>}` macro.

The commands for specifying authors are highly structured. The reason is they serve double duty: the authors' information is typeset in the manuscript *and* is used by the metadata extraction tools for indexing and cataloguing. Therefore it is very important to follow the guidelines exactly.

`\author` The basic commands are `\author`, `\orcid` (for the researchers registered with ORCID, <http://www.orcid.org/>), `\affiliation` and `\email`. In the simplest case, you enter them in this order:

```
\orcid
\affiliation
\email
\author{...}
\orcid{...}
\affiliation{...}
\email{...}
```

Do *not* use the \LaTeX `\and` macro or commas, or `\\` between the authors! Each author deserves his or her own `\author` command. An attempt to list several authors or their e-mails in one command leads to a warning or an error. This is not a bug, but the expected behavior.

Note that some formats do not typeset e-mails or ORCID identifiers. Do not worry: the metadata tools will get them.

Sometimes an author has several affiliations. In this case, the `\affiliation` command should be repeated:

```
\author{...}
\orcid{...}
\affiliation{...}
\affiliation{...}
\email{...}
```

Similarly you can repeat the `\email` command.

You may have several authors with the same affiliation, different affiliations, or overlapping affiliations (author A_1 is affiliated with institutions I_1 and I_2 , while author A_2 is affiliated with I_2 only, author A_3 is affiliated with I_1 and I_3 , etc.). The recommended solution is to put the `\affiliation` commands after each author, possibly repeating them:

```
\author{...}
\orcid{...}
\affiliation{...}
\affiliation{...}
\email{...}
\author{...}
\orcid{...}
\affiliation{...}
\email{...}
\author{...}
\orcid{...}
```

```

\affiliation{...}
\affiliation{...}
\email{...}

```

In some cases, when several authors share the same affiliation, you can try to save space using the format

```

\author{...}
\email{...}
\author{...}
\email{...}
\affiliation{...}

```

However, this format is not generally recommended.

`\additionalaffiliation`

In some cases, too many affiliations can take too much space. The command `\additionalaffiliation{<affiliation>}` creates a footnote after an author’s name with the words “Also with {<affiliation>}”. You should use this command only as a last resort. An example of usage is:

```

\author{G. Tobin}
\author{Ben Trovato}
\additionalaffiliation{%
  \institution{The Th{\o}rv{\a}ld Group}
  \streetaddress{1 Th{\o}rv{\a}ld Circle}
  \city{Hekla}
  \country{Iceland}}
\affiliation{%
  \institution{Institute for Clarity in Documentation}
  \streetaddress{P.O. Box 1212}
  \city{Dublin}
  \state{Ohio}
  \postcode{43017-6221}}

```

Here Trovato and Tobin share their affiliation with the Institute for Clarity in Documentation, but only Ben Trovato is affiliated with The Thørvæld Group.

`\position`
`\institution`
`\department`
`\streetaddress`
`\city`
`\state`
`\postcode`
`\country`

The `\affiliation` and `\additionalaffiliation` commands are further structured to interact with the metadata extraction tools. Inside these commands you should use the `\position`, `\institution`, `\department`, `\city`, `\streetaddress`, `\state`, `\postcode` and `\country` macros to indicate the corresponding parts of the affiliation. Note that in some cases (for example, journals) these parts are not printed in the resulting copy, but they *are* necessary since they are used by the XML metadata extraction programs. Do *not* put commas or `\\` between the elements of `\affiliation`. They will be provided automatically.

The fields `\institution`, `\city` and `\country` are mandatory. If they are not provided, an error or a warning is issued. Currently the absence of `\country` produces an error; ACM may change this in the future.

An example of the author block:

```

\author{A. U. Thor}
\orcid{1234-4564-1234-4565}
\affiliation{}

```

```

\institution{University of New South Wales}
\department{School of Biomedical Engineering}
\streetaddress{Samuels Building (F25), Kensington Campus}
\city{Sidney}
\state{NSW}
\postcode{2052}
\country{Australia}}
\email{author@nsw.au.edu}
\author{A. N. Other}
\affiliation{%
  \institution{University of New South Wales}
  \city{Sidney}
  \state{NSW}
  \country{Australia}}
\author{C. O. Respondent}
\orcid{1234-4565-4564-1234}
\affiliation{%
  \institution{University of Pennsylvania}
  \city{Philadelphia}
  \state{PA}
  \country{USA}}
\affiliation{%
  \institution{University of New South Wales}
  \city{Sidney}
  \state{NSW}
  \country{Australia}}

```

Note that the old ACM conference formats did not allow more than six authors and required some effort from authors to achieve alignment. The new format is much better in this.

Sometimes an author works in several departments within the same institution. There could be two situations: the departments are independent, or one department is within another. In the first case, just repeat the command `\department` several times. To handle the second case the command has an optional numerical parameter. The departments with higher numbers are higher in the organizational chart. Compare

```

\affiliation{%
  \department[0]{Department of Lunar Studies} % 0 is the default
  \department[1]{John Doe Institute} % higher than 0
  \institution{University of San Serriffe}
  \country{San Serriffe}}

```

and

```

\affiliation{%
  \department{Department of Lunar Studies} % Not in the John Doe Institute!
  \department{John Doe Institute}
  \institution{University of San Serriffe}
  \country{San Serriffe}}

```

The command `\affiliation` formats its output according to American conventions. This might be wrong for some cases. Consider, for example, a German address. In Ger-

many, the postcode is put before the city and is not separated by a comma. We can handle this order using

```
\affiliation{%
  \institution{Fluginstitut}
  \streetaddress{Sonnenallee 17}
  \postcode{123456}
  \city{Helm}
  \country{Germany}}
```

However, the comma after the postcode is unfortunate: the address will be typeset (in some formats) as

```
Fluginstitut
Sonnenallee 17
123456, Helm, Germany
```

To overcome this problem, the command `\affiliation` has an optional parameter `obeypunctuation`, which can be `false` (the default) or `true`. If this parameter is `true`, `\affiliation` obeys the author's command. Thus

```
\affiliation[obeypunctuation=true]{%
  \institution{Fluginstitut}\\
  \streetaddress{Sonnenallee 17}\\
  \postcode{123456}
  \city{Helm},
  \country{Germany}}
```

will be typeset as

```
Fluginstitut
Sonnenallee 17
123456 Helm, Germany
```

Note that you should *not* use this option for journals.

It is expected that these commands are inserted by the author of the manuscript.

`\thanks` Like `amsart` (and unlike standard \LaTeX), we allow `\thanks` only *outside* of the commands `\title` and `\author`. This command is obsolete and should *not* be used in most cases. Do not list your acknowledgments or grant sponsors here. Put this information in the `acks` environment (see Section 2.11).

`\authorsaddresses` In some formats, addresses are printed as a footnote on the first page. By default \LaTeX typesets them itself using the information you give it. However, you can override its choice using the command `\authorsaddresses{<contact addresses>}`, for example,

```
\authorsaddresses{%
  Authors' addresses: G.~Zhou, Computer Science Department, College of
  William and Mary, 104 Jameson Rd, Williamsburg, PA 23185, US;
  V.~B'eranger, Inria Paris-Rocquencourt, Rocquencourt, France;
  A.~Patel, Rajiv Gandhi University, Rono-Hills, Doimukh, Arunachal
  Pradesh, India; H.~Chan, Tsinghua University, 30 Shuangqing Rd,
  Haidian Qu, Beijing Shi, China; T.~Yan, Eaton Innovation Center,
  Prague, Czech Republic; T.~He, C.~Huang, J.~A.~Stankovic University
```

of Virginia, School of Engineering Charlottesville, VA 22903, USA;
 T. F. Abdelzaher, (Current address) NASA Ames Research Center,
 Moffett Field, California 94035.}

You can *suppress* printing authors' addresses by setting them to an empty string: `\authorsaddresses{}`. Please note that authors' addresses are mandatory for journal articles.

`\titlenote` While the command `\thanks` generates a note without a footnote mark, sometimes
`\subtitlenote` the authors might need notes more tightly connected to the title, subtitle or author. The
`\authornote` commands `\titlenote`, `\subtitlenote` and `\authornote` that follow the corresponding
 commands (`\title`, `\subtitle` and `\author`) generate such notes. For example,

```
\title{This is a title}
\titlenote{This is a titlenote}
\author{A. U. Thor}
\authornote{This is an authornote}
```

Please never use a `\footnote` inside an `\author` or `\title` command since this confuses the metadata extraction software. (Actually these commands now produce errors.)

`\authornotemark` Sometimes one may need to have the same footnote connected to several authors. The command `\authornotemark[number]` adds just the footnote mark, for example,

```
\author{A. U. Thor}
\authornote{Both authors contributed equally to the paper}
...
\author{A. N. Other}
\authornotemark[1]
```

The correct numbering of these marks is the responsibility of the user.

`\acmVolume` The macros `\acmVolume`, `\acmNumber`, `\acmArticle`, `\acmYear` and `\acmMonth` are
`\acmNumber` inserted by the editor and set the journal volume, issue, article number, year and month
`\acmArticle` correspondingly. The arguments of all these commands, including `\acmMonth`, is numerical. For example,
`\acmYear`
`\acmMonth`

```
\acmVolume{9}
\acmNumber{4}
\acmArticle{39}
\acmYear{2010}
\acmMonth{3}
```

Note that `\acmArticle` is used not only for journals but also for some conference proceedings.

`\acmArticleSeq` The articles in the same issue of a journal have a *sequence number*. It is used to vertically position the black blob on the first page of some formats. By default it is the same as the article number, but the command `\acmArticleSeq{n}` can be used to change it:

```
\acmArticle{39} % The sequence number will be 39 by default
\acmArticleSeq{5} % We redefine it to 5
```

Setting this number to zero suppresses the blob.

`\acmSubmissionID` If your paper got a Submission ID from the Conference Management System, put it here:

```
\acmSubmissionID{123-A56-BU3}
```

`\acmPrice` The macro `\acmPrice{<price>}` sets the price for the article, for example,

```
\acmPrice{25.00}
```

Note that you do not need to put the dollar sign here, just the amount. By default the price is \$15.00, unless the copyright is set to `usgov`, `rightsretained`, `iw3c2w3`, or `iw3c2w3g`, when it is suppressed. Note that to override the defaults you need to set the price *after* the `\setcopyright` command. Also, the command `\acmPrice{}` suppresses the printing of the price.

`\acmISBN` Book-like volumes have ISBN numbers attached to them. The macro `\acmISBN{<ISBN>}` sets it. Normally it is set by the typesetter, for example,

```
\acmISBN{978-1-4503-3916-2}
```

Setting it to the empty string, as `\acmISBN{}`, suppresses printing the ISBN.

`\acmDOI` The macro `\acmDOI{<DOI>}` sets the DOI of the article, for example,

```
\acmDOI{10.1145/9999997.9999999}
```

It is normally set by the typesetter. Setting it to the empty string, as `\acmDOI{}`, suppresses the DOI.

`\acmBadgeR`
`\acmBadgeL` Some conference articles get special distinctions, for example, the artifact evaluation for PPOPP 2016 (see <http://ctuning.org/ae/ppopp2016.html>). These articles display special badges supplied by the conference organizers. This class provides commands to add these badges: `\acmBadgeR[<url>]{<graphics>}` and `\acmBadgeL[<url>]{<graphics>}`. The first command puts the badge to the right of the title, and the second one—to the left. The arguments have the following meaning: [`<url>`], if provided, sets the link to the badge authority in the screen version, while `{<graphics>}` sets the graphics file with the badge image. The file must be a cropped square, which is scaled to a standard size in the output. For example, if the badge image is `ae-logo.pdf`, the command is

```
\acmBadgeR[http://ctuning.org/ae/ppopp2016.html]{ae-logo}
```

`\startPage` The macro `\startPage{<page>}` sets the first page of the article in a journal or book. It is used by the typesetter.

`\terms`
`\keywords` The command `\keywords{<keyword, keyword,...>}` sets keywords for the article. They must be separated by commas, for example,

```
\keywords{wireless sensor networks, media access control, multi-channel, radio interference, time synchronization}
```

CCSXML ACM publications are classified according to the ACM Computing Classification
\ccsdesc Scheme (CCS). CCS codes are used both in the typeset version of the publications *and* in
the metadata in various databases. Therefore you need to provide both \TeX commands
and XML metadata with the paper.

The tool at <http://dl.acm.org/ccs.cfm> can be used to generate CCS codes. After
you select the topics, click on “Generate CCS codes” to get results like the following:

```

\begin{CCSXML}
<ccs2012>
  <concept>
    <concept_id>10010520.10010553.10010562</concept_id>
    <concept_desc>Computer systems organization~Embedded systems</concept_desc>
    <concept_significance>500</concept_significance>
  </concept>
  <concept>
    <concept_id>10010520.10010575.10010755</concept_id>
    <concept_desc>Computer systems organization~Redundancy</concept_desc>
    <concept_significance>300</concept_significance>
  </concept>
  <concept>
    <concept_id>10010520.10010553.10010554</concept_id>
    <concept_desc>Computer systems organization~Robotics</concept_desc>
    <concept_significance>100</concept_significance>
  </concept>
  <concept>
    <concept_id>10003033.10003083.10003095</concept_id>
    <concept_desc>Networks~Network reliability</concept_desc>
    <concept_significance>100</concept_significance>
  </concept>
</ccs2012>
\end{CCSXML}

\ccsdesc[500]{Computer systems organization~Embedded systems}
\ccsdesc[300]{Computer systems organization~Redundancy}
\ccsdesc{Computer systems organization~Robotics}
\ccsdesc[100]{Networks~Network reliability}

```

You just need to copy this code and paste it in your paper anywhere before
 \maketitle .

CCS Concepts and user-defined keywords are required for all articles over two pages
in length, and are optional for one- and two-page articles (or abstracts).

\setcopyright There are several possibilities for the copyright of the papers published by the ACM:
the authors may transfer the rights to the ACM, license them to the ACM, some or all
authors might be employees of the US or Canadian governments, etc. Accordingly the
command $\setcopyright\{...\}$ is introduced. Its argument is the copyright status of
the paper, for example, $\setcopyright\{acmcopyright\}$. The possible values for this
command are listed in Table 3. This command must be placed in the preamble, before
 $\begin\{document\}$.

The ACM submission software should generate the right command for you to paste
into your file.

\copyrightyear Each copyright statement must have the year of copyright. By default it is the same
as \acmYear , but you can override this using the macro \copyrightyear , e.g.,

Table 3: Parameters for the `\setcopyright` command

Parameter	Meaning
<code>none</code>	The copyright and permission information is not typeset. (This is the option for some ACM conferences.)
<code>acmcopyright</code>	The authors transfer the copyright to the ACM (the “traditional” choice).
<code>acmlicensed</code>	The authors retain the copyright but license the publication rights to ACM.
<code>rightsretained</code>	The authors retain the copyright and publication rights to themselves or somebody else.
<code>usgov</code>	All the authors are employees of the US government.
<code>usgovmixed</code>	Some authors are employees of the US government.
<code>cagov</code>	All the authors are employees of the Canadian government.
<code>cagovmixed</code>	Some authors are employees of the Canadian government.
<code>licensedusgovmixed</code>	Some authors are employees of the US government, and the publication rights are licensed to ACM.
<code>licensedcagov</code>	All the authors are employees of the Canadian government, and the publication rights are licensed to ACM.
<code>licensedcagovmixed</code>	Some authors are employees of the Canadian government, and the publication rights are licensed to ACM.
<code>othergov</code>	Authors are employees of a government other than the US or Canada.
<code>licensedothergov</code>	Authors are employees of a government other than the US or Canada, and the publication rights are licensed to ACM.
<code>iw3c2w3</code>	Special statement for conferences organized by IW3C2.
<code>iw3c2w3g</code>	Special statement for conferences organized by IW3C2, when some authors are approved Google employees.

```
\acmYear{2016}
\copyrightyear{2015}
```

There is a special case for a personal copy that the authors may be allowed to generate for their use or a posting on a personal site (check the instructions for the specific journal or conference for the details). The document option `authorversion=true` produces a special form of the copyright statement for this case. Note that you still need the `\setcopyright` command and (optionally) `\copyrightyear` command to tell \TeX about the copyright owner and year. Also, you should be aware that due to the different sizes of the permission blocks for the printed version and authors' version, the page breaks might be different between them.

`abstract` The environment `abstract` must *precede* the `\maketitle` command. Again, this is different from the standard \LaTeX . Putting `abstract` after `\maketitle` will trigger an error.

`teaserfigure` A special kind of figure is used for many two-column conference proceedings. This figure is placed just after the authors but before the main text. The environment `teaserfigure` is used for these figures. This environment must be used *before* `\maketitle`, for example,

```
\begin{teaserfigure}
  \includegraphics[width=\textwidth]{sampleteaser}
  \caption{This is a teaser}
  \label{fig:teaser}
\end{teaserfigure}
```

`\settopmatter` Some information in the top matter is printed for certain journals or proceedings and suppressed for others. You can override these defaults using the command `\settopmatter{<settings>}`. The settings and their meanings are listed in Table 4. For example,

```
\settopmatter{printacmref=false, printccs=true, printfolios=true}
```

The parameter `authorsperrow` requires some explanation. In conference proceedings authors' information is typeset in boxes, several boxes per row (see `sample-sigconf.pdf`, `sample-sigplan.pdf`, etc.). The number of boxes per row is determined automatically. If you want to override this, you can do it using this parameter, for example,

```
\settopmatter{authorsperrow=4}
```

However, in most cases you should *not* do this and should use the default settings. Setting `authorsperrow` to 0 will revert it to the default settings.

The parameter `printacmref` specifies whether to print the ACM bibliographic entry (default), or not. Note that this entry is required for all articles over one page in length, and is optional for one-page articles (abstracts).

`\received` The command `\received[<stage>]{<date>}` sets the history of the publication. The `[<stage>]` argument is optional; the default is Received for the first date and revised for the subsequent ones. For example,

```
\received{February 2007}
\received[revised]{March 2009}
\received[accepted]{June 2009}
```

Table 4: Settings for the `\settopmatter` command

Parameter	Values	Meaning
<code>printccs</code>	true/false	Whether to print CCS categories
<code>printacmref</code>	true/false	Whether to print the ACM bibliographic entry
<code>printfolios</code>	true/false	Whether to print page numbers (folios)
<code>authorsperrow</code>	numeric	Number of authors per row for the title page in conference proceedings formats

`\maketitle` The macro `\maketitle` must be the last command in the top-matter group. That is it must follow the commands defined in this section.

`\shortauthors` After the command `\maketitle`, the macro `\shortauthors` stores the names of the authors for the running head. You can redefine it if the list of author's name is too long, e.g.,

```
\maketitle
\renewcommand{\shortauthors}{Zhou et al.}
```

2.4 Internationalization

ACM accepts publications in languages other than English, as well as papers in English with translations of titles, subtitles, keywords and abstracts into other languages. Papers in languages other than English usually have titles, subtitles (if applicable), keywords and abstracts in English. Note that CCS concepts are always typeset in English.

To submit these papers you need to set the option `language` in the `\documentclass` command. This option can be repeated, for example,

```
\documentclass[sigconf, language=french, language=english]{acmart}
```

The last language in the list is the main language of the paper, i.e. the one for the main title, abstract, body, etc. The other languages are *secondary*, and used for translated titles, keywords, abstracts. Thus the paper above is written in English, and has a secondary abstract and a secondary title in French. On the other hand, a paper in French with secondary titles and abstracts in English and German should use, for example

```
\documentclass[sigconf,
               language=german,
               language=english,
               language=french]{acmart}
```

This key can use any language defined in *babel* package [3] (currently the package is tested with English, French, German and Spanish languages; other languages may require a translation of `\keywordsname` macro). Actually *acmart* loads *babel* internally, so you can use the facilities provided by this package.

If this key is set, you have access to several additional top matter commands.

`\translatedtitle` The commands `\translatedtitle{<language>}title`, `\translatedsubtitle{<language>}subtitle`
`\translatedsubtitle` and `\translatedkeywordslanguagekeywords` are used to set title, subtitle and key-
`\translatedkeywords` words in the secondary language. For example, a paper in English with French title and abstract may set

```
\title{A note on computational complexity}
\translatedtitle{french}{Remarque sur la complexit'e de calcul}
```

while a paper in French should set

```
\title{Remarque sur la complexit'e de calcul}
\translatedtitle{english}{A note on computational complexity}
```

translatedabstract Similarly, translatedabstract environment has a mandatory language argument, for example,

```
\begin{translatedabstract}{english}
This is the English version of the abstract
\end{translatedabstract}
```

You can repeat these commands if a paper has more than one secondary language.

Use the standard commands (`\title`, `\subtitle`, `\keywords`, `abstract`) for the main language of the paper.

2.5 Algorithms

There are now several good packages for typesetting algorithms [4, 5, 6], and the authors are free to choose their favorite one.

2.6 Figures and tables

The new ACM styles use the standard L^AT_EX interface for figures and tables. There are some important items to be aware of, however.

1. The captions for figures must be entered *after* the figure bodies and for tables *before* the table bodies.
2. The ACM uses the standard types for figures and tables and adds several new ones. In total there are the following types:

figure, **table**: a standard figure or table taking a full text width in one-column formats and one column width in two-column formats.

figure*, **table*** in two-column formats, a special figure or table taking a full text width.

teaserfigure: a special figure before `\maketitle`.

3. Accordingly, when scaling images, one should use the following sizes:
 - (a) For `teaserfigure`, `figure` in one-column mode or `figure*` in two-column mode, use `\textwidth`. In one-column mode, you can also use `\columnwidth`, which coincides with `\textwidth` in this case.
 - (b) For `figure` in two-column mode, use `\columnwidth`.

It is strongly recommended to use the package `booktabs` [7] and follow its main principles of typography with respect to tables:

1. Never, ever use vertical rules.
2. Never use double rules.

It is also a good idea not to overuse horizontal rules.

For table *footnotes* you have several options described in the TeX FAQ [1]. The simplest one is to use a `\minipage` environment:

```

\begin{table}
\caption{Simulation Configuration}
\label{tab:conf}
\begin{minipage}{\columnwidth}
\begin{center}
\begin{tabular}{ll}
\toprule
TERRAIN\footnote{This is a table footnote. This is a
table footnote. This is a table footnote.} &
(200\,m$\times$200\,m) Square\\
Node Number & 289\\
Node Placement & Uniform\\
Application & Many-to-Many/Gossip CBR Streams\\
Payload Size & 32 bytes\\
Routing Layer & GF\\
MAC Layer & CSMA/MMSN\\
Radio Layer & RADIO-ACCNOISE\\
Radio Bandwidth & 250Kbps\\
Radio Range & 20m--45m\\
\bottomrule
\end{tabular}
\end{center}
\bigskip
\footnotesize\emph{Source:} This is a table
sourcenote. This is a table sourcenote. This is a table
sourcenote.

\emph{Note:} This is a table footnote.
\end{minipage}
\end{table}

```

Tables and figures are by default centered. However, in some cases (for example, when you use several subimages per figure) you may need to override this. A good way to do so is to put the contents into a `\minipage` of the width `\columnwidth`.

2.7 Descriptions of images

`\Description` Some readers of ACM publications might be visually challenged. These readers might use a voice-over software to read aloud the papers. It is important to provide them a description of each image used in the paper.

The command `\Description[short description]{long description}` should be placed inside every figure, `teaserfigure` or `marginfigure` environment to provide a description of the image(s) used in the figure. Unlike `\caption`, which is used alongside the image, `\Description` is intended to be used instead of the image, for example,

```

\begin{figure}
  \centering
  \includegraphics{voltage}
  \Description{A bell-like histogram centered at $0.5$~V with most
  measurements between $0.2$~V and $0.8$~V}
  \caption{Histogram of the measurements of voltage}
  \label{fig:voltage}
\end{figure}

```

At present the lack of descriptions generates a warning at compilation.

2.8 Theorems

The ACM classes define two theorem styles and several pre-defined theorem environments:

acmplain: this is the style used for theorem, conjecture, proposition, lemma and corollary, and

acmdefinition: this is the style used for example and definition.

These environments are defined by default. In the unusual circumstance that a user does not wish to have these environments defined, the option `acmthm=false` in the preamble will suppress them.

Sometimes authors want to define new theorem-like constructs that use theorem counters. These constructs must be defined either after `\begin{document}`, or delayed using `\AtEndPreamble` macro, for example,

```

\AtEndPreamble{%
  \theoremstyle{acmdefinition}
  \newtheorem{remark}[theorem]{Remark}}

```

2.9 Online-only and offline-only material

`printonly` Some supplementary material in ACM publications is put online but not in the printed
`screenonly` version. The text inside the environment `screenonly` will be typeset only when the option `screen` (see Section 2.2) is set to true. Conversely, the text inside the environment `printonly` is typeset only when this option is set to false. For example,

```

\section{Supplementary materials}

\begin{printonly}
  Supplementary materials are available in the online version of this paper.
\end{printonly}

\begin{screenonly}
  (The actual supplementary materials.)
\end{screenonly}

```

We use the `comment` package for typesetting this code, so `\begin` and `\end` should start on a line of their own with no leading or trailing spaces.

2.10 Note about anonymous mode

`anonsuppress` When the option `anonymous` is selected, \TeX suppresses author information (including the number of authors) for a blind review. However, sometimes the information identifying the authors may be present in the body of the paper. For example,

```
\begin{anonsuppress}
  This is the continuation of the previous work by the author
  \cite{prev1, prev2}.
\end{anonsuppress}
```

As for the `printonly` and `screenonly` environments, `\begin{anonsuppress}` and `\end{anonsuppress}` should start on a line of their own with no leading or trailing spaces.

`\anon` To suppress short snippets of information, use the command `\anon[<substitute>]{<suppressed-text>}`. By default [*<substitute>*] is the word ANONYMOUS. Examples:

```
This work was performed at \anon{NSA}.
This work was performed at \anon[No Such Agency]{NSA}.
```

2.11 Acknowledgments

The traditional “Acknowledgments” section is conventionally used to thank persons and granting agencies for their help and support. However, there are several important considerations about this section.

First, in anonymous mode this section must be omitted: it gives too much information to reviewers. Second, data about grants is extracted and stored separately by the postprocessing software. ACM classes provide facilities for both these tasks.

`acks` The environment `acks` starts an unnumbered section “Acknowledgments” unless the anonymous mode is chosen. Put all thanks inside this environment.

As for the `printonly` and `screenonly` environments, `\begin{acks}` and `\end{acks}` should start on a line of their own with no leading or trailing spaces.

`\grantsponsor` All financial support *must* be listed using the commands `\grantsponsor` and
`\grantnum` These commands tell the postprocessing software about the granting organization and grant. The format of these commands is the following:

```
\grantsponsor{<sponsorID>}{<name>}{<url>}
\grantnum[<url>]{<sponsorID>}{<number>}.
```

Here `{<sponsorID>}` is the unique ID used to match grants to sponsors, `{<name>}` is the name of the sponsor, `{<url>}` is its URL, and `{<number>}` is the grant number. The `{<sponsorID>}` of the `\grantnum` command must correspond to the `{<sponsorID>}` of a `\grantsponsor` command. Some awards have their own web pages, which you can include using the optional argument of the `\grantnum` command.

At present `{<sponsorID>}` is chosen by the authors and can be an arbitrary key in the same way the label of a `\cite` is arbitrarily chosen. There might be a change to this policy if the ACM decides to create a global database of sponsoring organizations.

Example:

```
\begin{acks}
  The authors would like to thank Dr. Yuhua Li for providing the
```

matlab code of the \textit{BEPS} method.

The authors would also like to thank the anonymous referees for their valuable comments and helpful suggestions. This work is supported by the \grantsponsor{GS501100001809}{National Natural Science Foundation of China}{https://doi.org/10.13039/501100001809} under Grant No.: ^\grantnum{GS501100001809}{61273304} and ^\grantnum[http://www.nsf.cn/youngscientists]{GS501100001809}{Young Scientists' Support Program}.

```
\end{acks}
```

2.12 Bibliography

The ACM lets you use either Bib \TeX or Bib \LaTeX to process your references: they require slightly different setup of your \LaTeX file, as detailed in the following subsections.

2.12.1 Processing using Bib \TeX

This uses the natbib package for formatting references and the Bib \TeX style file ACM-Reference-Format.bst for Bib \TeX processing. You can disable loading of natbib using the option natbib=false in \documentclass. However, it is not recommended, as well as the use of Bib \TeX styles other than ACM-Reference-Format.bst, and may delay the processing of the manuscript.

\citestyle If you use natbib, you can select one of two predefined citation styles using the command \citestyle: the author-year format acmauthoryear or the numeric format acmnumeric. For example,

```
\citestyle{acmauthoryear}
```

Note that numeric citations are the default mode for most formats.

\setcitestyle You can further customize natbib using the \setcitestyle command, for example,

```
\setcitestyle{numbers,sort&compress}
```

One of the more common versions is

```
\setcitestyle{nosort}
```

It is useful if you do not like the way natbib sorts citation lists.

If you use natbib, then commands like \citep and \citeauthor are automatically supported. The command \shortcite is the same as \cite in numerical mode and cites the year in author-date mode.

Note that before version 1.48 the command \citeyear put the year in parentheses. In version 1.48 and later it produces just the year; the command \citeyearpar can be used to emulate its old behavior.

There are several customized Bib \TeX entry types and fields in the ACM style file ACM-Reference-Format.bst that you may want to be aware of.

The style supports the fields doi and url, for example,

```
doi = "10.1145/1188913.1188915",
url = "http://ccrma.stanford.edu/~jos/bayes/bayes.pdf",
```

Normally the printing of URL is suppressed if DOI is present. However, there is a special field `distinctURL`. If it is present and is not zero, URL is printed even if DOI is present.

The style supports the arXiv-recommended fields `eprint` and (optionally) `primaryclass`, for example,

```
eprint = "960935712",
primaryclass = "cs",
```

See the examples at <https://arxiv.org/help/hypertex/bibstyles>.

There are several special entry types. Types `online` and `game` are used for Web pages and games, for example,

```
@online{Thornburg01,
  author = "Harry Thornburg",
  year = "2001",
  title = "Introduction to Bayesian Statistics",
  url = "http://ccrma.stanford.edu/~jos/bayes/bayes.html",
  month = mar,
  lastaccessed = "March 2, 2005",
}
```

Entry types `artifactsoftware`, `artifactdataset` (with synonyms `software` and `dataset`) can be used to cite software artifacts and datasets, for example,

```
@ArtifactSoftware{R,
  title = {R: A Language and Environment for Statistical Computing},
  author = {{R Core Team}},
  organization = {R Foundation for Statistical Computing},
  address = {Vienna, Austria},
  year = {2019},
  url = {https://www.R-project.org/},
}
@ArtifactDataset{UMassCitations,
  author = {Sam Anzaroot and Andrew McCallum},
  title = {{UMass} Citation Field Extraction Dataset},
  year = 2013,
  url =
    {http://www.iesl.cs.umass.edu/data/data-umasscitationfield},
  lastaccessed = {May 27, 2019}
}
```

For these entry types you can use the `lastaccessed` field to add the access date for the URL.

There are two ways to enter video or audio sources in the bibliography corresponding to two different possibilities. For standalone sources available online, you can use an `online` entry and set its `howpublished` field. For example,

```
@online{Obama08,
```

```

author = "Barack Obama",
year = "2008",
title = "A more perfect union",
howpublished = "Video",
day = "5",
url = "http://video.google.com/videoplay?docid=6528042696351994555",
month = mar,
lastaccessed = "March 21, 2008",
}

```

For sources available as attachments to conference proceedings and similar documents, you can use the usual `inproceedings` entry type and set its `howpublished` field:

```

@Inproceedings{Novak03,
author = "Dave Novak",
title = "Solder man",
booktitle = "ACM SIGGRAPH 2003 Video Review on Animation theater Program",
year = "2003",
publisher = "ACM Press",
address = "New York, NY",
pages = "4",
month = "March 21, 2008",
doi = "10.9999/woot07-S422",
howpublished = "Video",
}

```

Sometimes you need to cite a complete issue of a journal. The periodical entry type is intended for this:

```

@periodical{JCohen96,
key = "Cohen",
editor = "Jacques Cohen",
title = "Special issue: Digital Libraries",
journal = "Communications of the {ACM}",
volume = "39",
number = "11",
month = nov,
year = "1996",
}

```

If you do not know the year of publication, the style will add “[n. d.]” (for “no date”) to the entry.

If you do not know the author (this is often the case for online entries), use the `key` field to add a key for sorting and citations, for example,

```

@online{TUGInstmem,
key = {TUG},
year = 2017,
title = "Institutional members of the {\TeX} Users Group",
url = "http://wvtug.org/instmem.html",
lastaccessed = "May 27, 2017",
}

```

A note about sorting. The current ACM bibliography styles always sort the entries according to authors names and publication year. There is a controversy about sorting names with “von” or “van” part: should Ludwig van Beethoven be sorted under “V” or under “B”? The American practice is to use “van” in sorting, i.e. to file van Beethoven under “V”. However, some authorities recommend to sort Dutch persons according to their last names (see e.g. https://www.ifla.org/files/assets/cataloguing/pubs/names-of-persons_1996.pdf). While I do not want to take a part in this dispute, I would like to point to the old “noopsort” trick by Oren Patashnik. Add to the .bib file the line

```
@PREAMBLE{"\providecommand{\noopsort}[1]{}"}
```

and then encode the author as

```
author = {Ludwig {\noopsort{Beethoven}}van Beethoven},
```

This will make the author to be sorted as “Beethoven” rather than “van Beethoven”.

The current bst style defines a number of macros for common journal names. In particular, all journals listed in Table 5 are included, so you can use strings like `journal = taccess` for *ACM Transactions on Accessible Computing*.

2.12.2 Processing using Bib \LaTeX

You will find in this package two sets of style files for Bib \LaTeX , `acmnumeric` and `acmauthoryear`, that mimic the behaviour of the `ACM-Reference-Format.bst` Bib \TeX style. They provide you access to all the power of Bib \LaTeX and already include support for advanced citation of software artefact from the `biblatex-software` package, also separately available on CTAN. Look at the `biblatex-software` documentation to learn more about what it offers.

There are a few key differences in how the \LaTeX sources are set up when using Bib \LaTeX instead of Bib \TeX , that we summarize briefly here (please refer to the official Bib \LaTeX documentation for more details).

In the preamble of your document you need to load the Bib \LaTeX package and select the appropriate bibliography style, as follows

```
\RequirePackage[
  datamodel=acmdatamodel,
  style=acmnumeric, % use style=acmauthoryear for publications that require it
]{biblatex}
```

Also in the preamble, you need to declare the bibliography sources files using the `\addbibresource` directive (one `\addbibresource` command per source file), e.g.:

```
\addbibresource{software.bib}
\addbibresource{sample-base.bib}
```

At the end of the document, where you want the bibliography to appear, you need to place the command `\printbibliography`.

Look at the `sample-*-biblatex.tex` files that can be found in the `samples` directory after running `make` for templates showcasing these Bib \LaTeX styles.

2.13 Colors

While printed ACM publications are usually black and white, screen mode allows the use of colors. The ACM classes pre-define several colors according to [8]: ACMBLue, ACMYellow, ACMOrange, ACMRed, ACMLightBlue, ACMGreen, ACMPurple and ACMDarkBlue. You can use them in color assignments.

The ACM provides the following recommendation on color use.

The most accessible approach would be to ensure that your article is still readable when printed in greyscale. The most notable reasons for this are:

1. The most common type of inherited Color Vision Deficiency (CVD) is red-green (in which similar-brightness colors that differ only in their amounts of red or green are often confused), and it affects up to 8% of males and 0.5% of females of Northern European descent.
2. The most common type of acquired Color Vision Deficiency (CVD) is blue-yellow (including mild cases for many older adults).
3. Most printing is in black and white.
4. Situational impairments (e.g., bright sunlight shining on a mobile screen) tend to reduce the entire color gamut, reducing color discriminability.

Note: It is *not* safe to encode information using only variations in color (i.e., only differences in hue and/or saturation) as there is bound to be someone affected!

To ensure that you are using the most accessible colors, the ACM recommends that you choose sets of colors to help ensure suitable variations in when printed in greyscale by using either of the following tools:

1. ColourBrewer: <http://colorbrewer2.org/>
2. ACE: The Accessible Colour Evaluator: <http://daprlab.com/ace/> for designing WCAG 2.0 compliant palettes.

2.14 Other notable packages and typographic remarks

Several other packages are recommended for specialized tasks.

The package `subcaption` [9] is recommended for complex figures with several subplots or subfigures that require separate subcaptioning. The packages `nomencl` [10] and `glossaries` [11] can be used for the automatic creation of the lists of symbols and concepts used.

By default `acmart` prevents all widows and orphans (i.e., lonely lines at the beginning or end of the page) and hyphenation at the end of the page. This is done by the rather strict settings

```
\widowpenalty=10000
\clubpenalty=10000
\brokenpenalty=10000
```

However, this may lead to frustrating results when the authors must obey a page limit. Setting these penalties to smaller values may help if you absolutely need to.

Another problem might be the too strict line breaking rules. Again, a strategically placed `\sloppy` command or putting the problematic paragraph inside `sloppy` environment might help—but beware, the results might be, well, sloppy.

Note that the uppercasing in section titles is done using the `textcase` package [12], so the command `\NoCaseChange` inside the title may help to prevent extraneous uppercasing.

2.15 Counting words

Some ACM conferences use word count limits for papers. The calculation of word number for a paper with math, tables and figures is not a trivial task. Currently the authoritative word count is done by translating the PDF to text and using `wc -w` on the output. Authors can use the package `texcount` (used by Overleaf) to get an estimate of the word count. To facilitate this one adds to the beginning of the package metacomments

```
%TC:macro \cite [option:text,text]
%TC:macro \citep [option:text,text]
%TC:macro \citet [option:text,text]
%TC:envir table 0 1
%TC:envir table* 0 1
%TC:envir tabular [ignore] word
%TC:envir displaymath 0 word
%TC:envir math 0 word
%TC:envir comment 0 0
```

and uses `\begin{math}... \end{math}` instead of dollar signs for math. Note that the count is in any case approximate, and the final decision of editors is based on PDF count.

The script `texcount` provides a report of word count in the document.

2.16 Disabled or forbidden commands

The goal of `acmart` package is to provide a uniform look and feel for ACM publications. Accordingly, a number of commands is forbidden or disabled in `acmart`.

You may *not* put several authors or several e-mails into a `\author` or `\email` command. This may lead to errors or warning.

You cannot change `\baselinestretch` in your document: this produces an error.

You should not abuse the command `\vspace`: this command may disturb the typesetting of ACM papers.

You should not load `amssymb` package since the package `acmart` defines the corresponding symbols itself.

2.17 Notes for wizards

Sometimes you need to change the behavior of `acmart`. The usual way to do this is to redefine commands in the preamble. However, these definitions are executed *after* `acmart` is loaded and certain decisions are made. This presents a number of problems.

For example, one may want to use the `titletoc` package with `acmart`. This package should be loaded before `hyperref`. However, since `acmart` loads `hyperref` itself, the line `\usepackage{titletoc}` in the preamble will lead to grief (see <http://tex.stackexchange.com/questions/357265/using-titletoc-with-acm-acmart-style>).

Another example is passing options to a package. Suppose you want to use the `dvipnames` option of the `xcolor` package. Normally you cannot do this because `acmart` loads this package itself without options.

The file `acmart-preload-hook.tex` can be used to solve these problems. If this file exists, it will be processed before any other package. You can use this file to load packages or pass options to them. For example, if you put in this file

```
\let\LoadClassOrig\LoadClass
\renewcommand\LoadClass[2][\LoadClassOrig[#1]{#2}%
\usepackage{titletoc}
```

then `titletoc` will be loaded before `hyperref`. If you put in this file

```
\PassOptionsToPackage{dvipsnames}{xcolor}
```

you will pass `dvipsnames` to `xcolor`.

Important note. This hook makes it too easy to create a manuscript that is not acceptable by the ACM. It is even easier to create a file that cannot be compiled. So please do not use it *unless you know what you are doing*. And if you use it, *do not ask for support*. If you decide to use this hook, you are on your own.

`\AtBeginMaketitle` Another hook is `\AtBeginMaketitle`. The commands in this hook are executed before `\maketitle`, for example,

```
\AtBeginMaketitle{\acmPrice{125.00}}
```

2.18 Currently supported publications

Table 5: ACM publications and arguments of the `\acmJournal` command (continued)

Abbreviation	Publication
TSLP	ACM Transactions on Speech and Language Processing
TWEB	ACM Transactions on the Web

Besides the publications listed in Table 5, there is a special “publication” type FACMP, a forthcoming ACM publication, reserved for new journals which are not assigned an ISSN yet.

2.19 A note about sigchi-a format

Starting in Spring 2020 ACM retired SIGCHI Extended Abstract format (`sigchi-a`). ACM will not, under any circumstances, accept documents in this format for publication and will not offer technical support to the authors who use this template.

You may use this format in the `nonacm` mode only, as in

```
\documentclass[sigchi-a, nonacm]{acmart}
```

sidebar
marginfigure
margintable

This format has large margin uses for special figures and tables. This package provides three environments for this with optional captions:

sidebar: textual information in the margin,

marginfigure: a figure in the margin,

margintable: a table in the margin.

The environments `figure` and `table` produce figures and tables with the width of the text column. The environments `figure*` and `table*` produce “wide” figures and tables, which take a large part of the margin.

The horizontal sizes of figures are:

1. `figure`: `\columnwidth`,
2. `marginfigure`: `\marginparwidth`,
3. `figure*`: `\fulltextwidth`.

3 Implementation

3.1 Identification

We start with a declaration of who we are. Most .dtx files put driver code in a separate .drv driver file. We roll this code into the main file and use the pseudo-guard <gobble> for it.

```
1 <class>\NeedsTeXFormat{LaTeX2e}
2 <*gobble>
3 \ProvidesFile{acmart.dtx}
4 </gobble>
5 <class>\ProvidesClass{acmart}
6 [2022/04/09 v1.84 Typesetting articles for the Association for Computing Machinery]
```

And the driver code:

```
7 <*gobble>
8 \documentclass{ltxdoc}
9 \usepackage{array,booktabs,amsmath,graphicx,fancyvrb,tabularx, longtable}
10 \usepackage[tt=false, type1=true]{libertine}
11 \usepackage[varqu]{zi4}
12 \usepackage[libertine]{newtxmath}
13 \usepackage[tableposition=top]{caption}
14 \usepackage{hypdoc}
15 \PageIndex
16 \CodelineIndex
17 \RecordChanges
18 \EnableCrossrefs
19 \begin{document}
20   \DocInput{acmart.dtx}
21 \end{document}
22 </gobble>
23 <*class>
24 \def\@classname{acmart}
```

3.2 Preload hook

We preload acmart-preload-hook:

```
25 \InputIfFileExists{acmart-preload-hook.tex}{%
26   \ClassWarning{\@classname}{%
27     I am loading acmart-preload-hook.tex. You are fully responsible
28     for any problems from now on.}}{}
```

3.3 Options

We need xkeyval since some of our options may have values:

```
29 \RequirePackage{xkeyval}
   We use xstring to check whether user input is valid
30 \RequirePackage{xstring}
   We need iftex to check the engine
31 \RequirePackage{iftex}
```

format The possible formats

```
32 \define@choicekey*+{acmart.cls}{format}[\ACM@format\ACM@format@nr]{%
33 manuscript, acmsmall, acmlarge, acmtog, sigconf, siggraph,
34 sigplan, sigchi, sigchi-a}[manuscript]{}{%
35 \ClassError{\@classname}{The option format must be manuscript,
36 acmsmall, acmlarge, acmtog, sigconf, siggraph,
37 sigplan, sigchi or sigchi-a}}
38 \def\@DeclareACMFormat#1{\DeclareOptionX{#1}{\setkeys{acmart.cls}{format=#1}}}
39 \@DeclareACMFormat{manuscript}

3.8 Sectioning

`\startsection` Before we call `hyperref`, we redefine `\startsection` commands to their \LaTeX defaults since the `amsart` ones are too AMS-specific. We need to do this early since we want `hyperref` to have a chance to redefine them again:

```
419 \def\@startsection#1#2#3#4#5#6{%
420   \if@noskipsec \leavevmode \fi
421   \par
422   \@tempskipa #4\relax
423   \@afterindenttrue
424   \ifdim \@tempskipa <\z@
425     \@tempskipa -\@tempskipa \@afterindentfalse
426   \fi
427   \if@nobreak
428     \everypar{}%
429   \else
430     \addpenalty\@secpenalty\addvspace\@tempskipa
431   \fi
432   \@ifstar
433     {\@ssect{#3}{#4}{#5}{#6}}%
434     {\@dblarg{\@sect{#1}{#2}{#3}{#4}{#5}{#6}}}
435 \def\@sect#1#2#3#4#5#6[#7]#8{%
436   \edef\@toclevel{\ifnum#2=\@m 0\else\number#2\fi}%
437   \ifnum #2>\c@secnumdepth

724 \fi

```

`\normalparindent` The `amsart` package defines the `\normalparindent` length and initializes it to 12pt (the value of `\parindent` in `amsart`). It is later used to set the `\listparindent` length in the quotation environment and the `\parindent` length in the `\@footnotetext` command. We set `\normalparindent` to the value of `\parindent` as selected by `acmart` for consistent paragraph indents.

```
725 \setlength\normalparindent{\parindent}
```

Footnotes require some consideration. We have several layers of footnotes: front-matter footnotes, “regular” footnotes and the special insert for the `bibstrip`. In the old ACM classes, the `bibstrip` was a `\@float`. The problem with floats is that they tend to, well, float—and we want the guarantee they stay.

We use `manyfoot` for layered footnotes instead.

`\copyrightpermissionfootnoterule` This is the footnote rule that separates the `bibstrip` from the rest of the paper. It is a full width rule.

```

726 \def\copyrightpermissionfootnoterule{\kern-3\p@
727   \hrule \@width \columnwidth \kern 2.6\p@}

```

```

728 \RequirePackage{manyfoot}
729 \SelectFootnoteRule[2]{copyrightpermission}
730 \DeclareNewFootnote{authorsaddresses}
731 \SelectFootnoteRule[2]{copyrightpermission}
732 \DeclareNewFootnote{copyrightpermission}

```

`\footnoterule` Tschichold's rules:

```

733 \def\footnoterule{\kern-3\p@
734 \hrule \@width 4pc \kern 2.6\p@}

```

`\endminipage` We do not use footnote rules in minipages

```

735 \def\endminipage{%

943 \def\labelenumiv{\theenumiv.}
944 \or % sigchi
945 \or % sigchi-a
946 \fi

```

The AMS uses generous margins for lists. Note that `amsart` defines `\leftmargin` values for list levels at the beginning of the document, so we must redefine them in the same manner. Also, note that `amsart` redefines the `enumerate` and `itemize` environments with a `\makeLabel` command that uses `\llap`, so the `\labelwidth` value is (effectively) irrelevant; nonetheless, we follow `amsart` and set `\labelwidth` to `\leftmargin` minus `\labelsep`.

```

947 \newdimen\@ACM@labelwidth
948 \AtBeginDocument{%
949   \setlength\labelsep{4pt}
950   \setlength{\@ACM@labelwidth}{6.5pt}

```

`\if@insideauthorgroup` Whether we are continuing an author group

```

1388 \newif\if@insideauthorgroup
1389 \@insideauthorgroupfalse

```

`\author` Adding an author to the list of authors and addresses.

Note that we want to typeset the link to the author’s orcid if known. The problem is, we know the orcid only after the author is entered. The trick is based on the idea that `\csname . . . \endcsname` is `\relax` unless defined. Therefore we typeset authors by the special macro `\csname typeset@author\the\num@authors\endcsname`, which is defined by `\orcid` command.

```

`\@printtopmatter` The printing of top matter starts a new page and uses the given title box. Note that for `sigchi-a` we print badges here rather than in `\mktitle` since we want them in the margins.

Note that if there are too many authors, `\mktitle@bx` might overflow the page. Therefore we start with checking this and if this happens, we split the box and print it page by page.

```

\@ACM@addtoaddress This macro adds an item to the address using the following rules:

1. If we start a paragraph, add the item
2. Otherwise, add a comma and the item
3. However, the comma is deleted if it is at the end of a line. We use the magic \cleaders trick for this.

```

3.22 Sectioning

\ACM@NRadjust Ross Moore's macro.

Initially \ACM@sect@format@ just passes through its #1 argument unchanged. When a sectioning macro such as \section occurs, the \ACM@NRadjust redefines \ACM@sect@format@ to expand into the styling commands; e.g., \@secfont. Then \Sectionformat is temporarily redefined to produce \realSectionformat{\ACM@sect@format{#1}}{#2}, which ultimately becomes \Sectionformat{\@secfont{#1}}{#2}. This is done to allow \Sectionformat to be variable, as may be needed in particular circumstances. Its current expansion is saved as \realSectionformat which is used with the modified 1st argument, then \Sectionformat is reverted to its former expansion.

To style the section-number, the line #1{} is used at the end of \ACM@NRadjust. This imposes style-changing commands for fonts and sizes, but any \MakeUppercase acts on just the {}. It's a bit hacky, by essentially assuming that only numbers occur here, not letters to be case-changed. (This should be acceptable in a class-file, as it ought to be possible to change the case elsewhere, if that was ever desired.) Also, it can result in \@adddotafter being called too soon, so a slight adjustment is made, via \ACM@adddotafter, which now tests whether its argument is empty. But the coding has to allow for other packages to have also patched \@adddotafter.

```

```

`\@addspaceafter` Add space after a sectioning command

```
2976 \def\@addspaceafter#1{#1\@addpunct{\enspace}}
```

3.23 TOC lists

`\@dotsep` Related to the `\tableofcontents` are all the horizontal fillers. Base \LaTeX defines `\@dottedtocline`, which we should not disable. Yet, this command expects `\@dotsep` to be defined but leaves this to the class implementation. Since `amsart` does not provide this, we copy the standard variant from `article` here.

```
2977 \providecommand*\@dotsep{4.5}

Make acmplain the default theorem style.

```

3038 \theoremstyle{acmplain}

```

Delay defining the theorem environments until after other packages have been loaded. In particular, the `cleveref` package must be loaded before the theorem environments are defined in order to show the correct environment name (see <https://github.com/borisveytsman/acmart/issues/138>). The `acmthm` option is used to suppress the definition of any theorem environments. Also, to avoid obscure errors arising from these environment definitions conflicting with environments defined by the user or by user-loaded packages, we only define environments that have not yet been defined.

```

```

3.26 Acknowledgments

```

\acksname
3139 \newcommand\acksname{Acknowledgments}

\acks This is a comment-like structure
3140 \specialcomment{acks}{%
3141   \begingroup
3142   \section*{\acksname}
3143   \phantomsection\addcontentsline{toc}{section}{\acksname}
3144 }{%

```

```
3145 \endgroup
3146 }
```

`\grantsponsor` We just typeset the name of the sponsor

```
3147 \def\grantsponsor#1#2#3{#2}
```

`\grantnum`

```
3148 \newcommand\grantnum[3][]{#3%
3149 \def\@tempa{#1}\ifx\@tempa\@empty\else\space(\url{#1})\fi}
```

3.27 Conditional typesetting

We use the comment package for conditional typesetting:

```
3150 \AtEndPreamble{%
3151 \if@ACM@screen
3152 \includecomment{screenonly}
3153 \excludecomment{printonly}
3154 \else
3155 \excludecomment{screenonly}
3156 \includecomment{printonly}
3157 \fi
3158 \if@ACM@anonymous
3159 \excludecomment{anonsuppress}
3160 \excludecomment{acks}
3161 \else
3162 \includecomment{anonsuppress}
3163 \fi}
```

3.28 Additional bibliography commands

`\showeprint` The command `\showeprint` has two arguments: the (optional) prefix and the eprint number. Right now the only prefix we understand is the (lowercase) word ‘arxiv’.

```
3164 \newcommand\showeprint[2][arxiv]{%
3165 \def\@tempa{#1}%
3166 \ifx\@tempa\@empty\def\@tempa{arxiv}\fi
3167 \def\@tempb{arxiv}%
3168 \ifx\@tempa\@tempb\relax
3169 arXiv:\href{https://arxiv.org/abs/#2}{#2}%
3170 \else
3171 \def\@tempb{arXiv}%
3172 \ifx\@tempa\@tempb\relax
3173 arXiv:\href{https://arxiv.org/abs/#2}{#2}%
3174 \else
3175 #1:#2%
3176 \fi
3177 \fi}
```

3.29 Index

`\theindex` Standard `amsart` uses plain page style in index pages. This clashes with line numbering for review option, so we redefine it.

```
3178 \def\theindex{\@restonecoltrue\if@twocolumn\@restonecolfalse\fi}
```

```

3179 \columnseprule\z@ \columnsep 35\p@
3180 \@indextitlestyle
3181 \let\item\@idxitem
3182 \parindent\z@ \parskip\z@\@plus.3\p@\relax
3183 \raggedright
3184 \hyphenpenalty\@M
3185 \footnotesize}

```

3.30 End of Class

`\vspace` We do not disable `\vspace`, but add warning to it

```

3186 \let\@vspace@orig=\vspace
3187 \let\@vspacer@orig=\vspacer
3188 \apptocmd{\@vspace}{\ClassWarning{\@classname}{\string\vspace\space should
3189   only be used to provide space above/below surrounding
3190   objects}}{}}
3191 \apptocmd{\@vspacer}{\ClassWarning{\@classname}{\string\vspace\space should
3192   only be used to provide space above/below surrounding
3193   objects}}{}}
3194 \let\@vspace@acm=\@vspace
3195 \let\@vspacer@acm=\@vspacer

```

`\ACM@origbaselinestretch` We produce an error if the user tries to change `\baselinestretch`

```

3196 \let\ACM@origbaselinestretch\baselinestretch
3197 \AtEndDocument{\ifx\baselinestretch\ACM@origbaselinestretch\else
3198   \ClassError{\@classname}{An attempt to redefine
3199     \string\baselinestretch\space detected. Please do not do this for
3200     ACM submissions!}\fi}

3201 \normalsize\normalfont\frenchspacing
3202 </class>

```

Change History

1.48	General: Added prologue option to xcolor	47	General: ACM reference format is now mandatory for papers over one page; CCS concepts and keywords are now mandatory for papers over two pages	33
	Bib code cleanup (Zack Weinberg)	33	Authors' addresses are mandatory for journal articles	33
	Documentation update (siggraph)	33		
1.49	General: New journal: DTRAP	33		
1.53	General: New journals: PACMCGIT, TIOT, TDSCI	33	1.69	\vspace: Added the changed command to avoid grouping
	Rearranged docs	33	1.70	General: Name change for TDS
1.54	General: Moved footnote stuff before hyperref call (Ross Moore)	33	1.71	General: Bibliography change: volume for @inproceedings is now in brackets together with series
1.56	General: Documented \Description	33		LuaTeX now uses the OTF versions of fonts
1.57	General: Booktabs package is now the default	33		Retired sigchi and sigchi-a
1.58	General: Changes in samples (Enrico Gregorio)	33	1.75	General: Documentation update
	New journal: HEALTH. TDS is renamed to TDSCI	33	1.78	General: Documentation update: Word count
1.60	\if@ACM@urlbreakonhyphens: introduced macro	34	1.79	General: Updated indormation for TAP, TCPS, TEAC
	General: New option: urlbreakonhyphens	33	1.80	General: Added DLT and FAC
1.62	General: New journal: TELO	33	1.82	General: Updated abbreviations and codes for several journals
1.63	General: New journal: FACMP	33	1.84	General: New journals: JDS, GAMES
	New journal: TQUANT	33		
1.63a	General: Move: TQUANT to TQC	33	v1.00	General: First released version
1.64	General: Putting abstract after \maketitle now causes an error	33	v1.01	General: Changed hyperref colors in screen mode (closes https://github.com/borisveytsman/acmart/issues/1)
1.65	General: New journal: DGOV	33		Defined ACM colors
1.66	\@mkauthorsaddresses: Added warning for missing addresses	90		Explicitly put draft option (closes https://github.com/borisveytsman/acmart/issues/4)
	\ccsdesc@parse: Added warning for missing concepts	71		Set headheight to 1pc for all formats (closes https://github.com/borisveytsman/acmart/issues/4)
	\if@ACM@printacmref: Added warning for longer papers	69		
	\keywords: Added warning for missing keywords	69		

	//github.com/borisveytsman/acmart/issues/5)	33		<code>\@printtopmatter</code> : Added processing badges	80
v1.02	General: Added TOPS and TSC (closes https://github.com/borisveytsman/acmart/issues/12)	33		<code>\@subtitlefont</code> : Added macro	82
	Documentation changes (closes https://github.com/borisveytsman/acmart/issues/13)	33		<code>\@titlefont</code> : Added macro	81
				<code>\acmBadgeL</code> : Added macro	68
				<code>\acmBadgeR</code> : Added macro	68
				<code>\if@ACM@badge</code> : Added macro	68
v1.03	<code>\@formatdoi</code> : Added macro	73	v1.07	<code>\maketitle</code> : Corrected a bug with abstract footnotes	77
	<code>\if@ACM@authorversion</code> : Added macro	35		Corrected a bug with permission and footnotes order	77
	<code>\maketitle</code> : Added special case of authorversion	77	v1.08	General: SIGPLAN reformatting by Matthew Fluet	33
	General: Added anonsuppress environment	33		Typos corrected (Tobias Pape)	33
	Added authorversion option (closes https://github.com/borisveytsman/acmart/issues/9)	33	v1.09	General: Revert SIGPLAN caption rules	33
v1.04	<code>\acmArticleSeq</code> : Name change by Matthew Fluet	67	v1.10	<code>\maketitle</code> : Corrected a bug with doi in manuscript and author version, https://github.com/borisveytsman/acmart/issues/36	77
	<code>\acmDOI</code> : Name change by Matthew Fluet	68		General: Changes of 'licensedothergov' wording	72
	<code>\acmISBN</code> : Name change by Matthew Fluet	68		<code>standardpagestyle</code> : Reversed folios location	94
	General: Updated bibliography for siggraph	33	v1.11	General: Customization of ACM theorem styles and proof environment by Matthew Fluet	33
v1.05	General: Added processing doi numbers for acmsiggraph and doi numbers for sigproc.bib	33	v1.12	<code>\@marginfigure</code> : Now centering by default	54
	Patched <code>\setcitestyle</code> command; closes https://github.com/borisveytsman/acmart/issues/19	33		<code>\@marginable</code> : Now centering by default	54
				<code>\@parfont</code> : Moved to <code>\section@raggedright</code>	99
v1.06	<code>\@ACM@badge@skip</code> : Added macro	68		<code>\copyrightpermissionfootnoterule</code> : Added macro	49
	<code>\@ACM@badge@width</code> : Added macro	68		<code>\descriptionlabel</code> : Redefined	56
	<code>\@ACM@title@width</code> : Added macro	68		<code>\footnoterule</code> : Made shorter	50
	<code>\@mktitle@i</code> : Added processing badges	82		<code>\if@ACM@natbib@override</code> : Added macro	35
	Made generic	82		<code>\if@ACM@newfonts</code> : Added macro	51
	<code>\@mktitle@ii</code> : Now this macro is obsolete	83		<code>\maketitle</code> : Moved thankses to <code>copyrightpermission</code> box	77
	<code>\@mktitle@iii</code> : Added processing badges	83		<code>\section@raggedright</code> : Introduced macro	99
	Made more generic	83		General: Added graceful behavior when libertine fonts are absent	50
	<code>\@mktitle@iv</code> : Made more generic	83		Documentation updates	33

v1.13		standardpagestyle: Better handling of anonymous mode	94
	\@mpfootnotetext: Made minipage footnotes centered		45
	\bibliographystyle: Redefined macro		47
	\bibstyle@acmauthoryear: Added macro		40
	\bibstyle@acmnumeric: Added macro		41
	\if@ACM@printfolios: Added macro		69
	General: Font adjustments for acmsmall		85
	Increased font size for ACM Large		38
	Print bibliographic information by default for the proceedings		70
	standardpagestyle: Added headers for sigs		94
	Expanded headers for sigchi-a . . .		94
	Suppressed folios if sig		94
v1.14			
	\bibstyle@acmauthoryear: Moved def of \bibstyle@acmauthoryear before use		40
	\bibstyle@acmnumeric: Moved def of \bibstyle@numeric before use . . .		41
	General: \citestyle updates (Matthew Fluet)		33
	Patched \citestyle		39
v1.15			
	\@ACM@addtoaddress: Added macro		84
	\@mkauthors@iii: New authors system		88
	\@shortauthors: Introduced macro . .		94
	\@typeset@author@bx: Moved to separate macro		87
	\acks: Added macro		104
	\affiliation: Added code for author groups		65
	\author: Added code for author groups		64
	\city: Added macro		84
	\country: Added macro		84
	\department: Added macro		84
	\grantnum: Added macro		105
	\grantsponsor: Added macro		105
	\if@insideauthorgroup: Introduced macro		64
	\institution: Added macro		84
	\num@authorgroups: Renamed		64
	\orcid: Introduced macro		66
	\position: Added macro		84
	\postcode: Added macro		84
	\state: Added macro		84
	\streetaddress: Added macro		84
		standardpagestyle: Better handling of anonymous mode	94
v1.16			
	\@headfootfont: Added macro		94
	General: Formatting header/footer (Matthew Fluet)		33
	standardpagestyle: Customize header/footer text font		94
v1.17			
	\@makefnmark: Redefined		45
	\@mkauthors: TOG now uses the same authors block as other journals . .		84
	\@mkauthors@ii: Deleted		87
	\@mkbibcitation: Added \nobreak		91
	Changed format for sigs		91
	\acmArticle: The default is now numerical		67
	\acmMonth: The default must be numerical. Closes #50.		67
	\acmNumber: The default is now numerical		67
	\acmVolume: The default is now numerical		67
	\acmYear: The default is now numerical		67
	\description: Decreased indent . . .		56
	\grantnum: Added url		105
	\grantsponsor: Renamed		105
	\if@ACM@printacmref: Renamed from \if@ACM@printbib		69
	General: Slightly decreased margins for sigs		48
	standardpagestyle: Added paper title to sigs		94
v1.18			
	\@mkauthors@i: Now we andify affiliations		86
	\@typeset@author@line: Added macro		86
	General: Natbib is now the default for all formats		33
v1.19			
	\@mkabstract: Include 'Abstract' in PDF bookmarks (Matthew Fluet) . .		91
	\acks: Include 'Acknowledgements' in PDF bookmarks (Matthew Fluet) . . .		104
	General: Include 'Abstract', 'Acknowledgements', and 'References' in PDF bookmarks (Matthew Fluet)		33
	Include 'References' in PDF bookmarks (Matthew Fluet)		39
v1.20			
	\@mkabstract: Deleted spurious space		91

General: Bug fixes for bst	33	\acmYear: The default now is the current year (Matteo Riondato)	67
v1.21		\additionalaffiliation: Added macro	65
v1.22		\l@section: Redefined macro	45
General: More bibliography changes for Aptara	33	\l@subsection: Redefined macro	45
v1.23		General: Documentation changes	33
General: Add PACMPL journal option	33	v1.32	
v1.24		\@formatdoi: New doi format	73
General: Add IMWUT journal option	56	General: Added POMACS journal option	33
v1.25		Format siggraph is now obsolete	33
General: Updated PACMPL	56	v1.33	
v1.26		\@ACM@addtoaddress: Added obeypunctuation code	84
General: Corrected \shortcite bug	33	\@mkauthors@i: Added obeypunctuation code	86
Documentation typos fixed (thanks to Stephen Spencer)	33	\@mkauthors@iii: Added obeypunctuation code	88
v1.27		\@mkauthors@iv: Added obeypunctuation code	89
\if@ACM@printccs: Typo corrected	69	\@subtitlefont: Added \normalsize	82
v1.28		\ACM@linecountL: Renamed macro	93
\ccsdesc@parse: Change from \to to \textrightarrow (Matteo Riondato)	71	\ACM@linecountR: Added macro	93
General: Corrected option natbib behavior	41	\ACM@timestamp: Added current page number	93
Got rid of warnings in pdf keywords	46	Added macro (Michael D. Adams)	93
v1.29		Added submission id	93
\@mkabstract: Removed spurious indentation (John Wickerson)	91	\acmSubmissionID: Added macro	68
\ccsdesc@parse: Add spacing after bullet and around rightarrow; semicolon separators no longer in bold/italic (John Wickerson)	71	\city: Added obeypunctuation code	84
General: Increased head to 13pt	48	\country: Added obeypunctuation code	84
standardpagestyle: Corrected printfolios (Matthew Fluet)	94	\department: Added obeypunctuation code	84
v1.30		\if@ACM@affiliation@obeypunctuation: Added macro	65
\department: Added optional parameter	84	\if@ACM@authordraft: Added macro	36
General: Added \frenchspacing	106	\if@ACM@natbib@override: Deleted macro	35
Bibtex style now recognizes https:// in doi	33	\if@ACM@timestamp: Added macro (Michael D. Adams)	36
Switched to T1: looks like libertine has problems with \l in OT1	51	\institution: Added obeypunctuation code	84
Updated IMWUT and PACMPL	56	\maketitle: Fixed the bug with figures on top and bottom of the title page, thanks to David Epstein	77
v1.31		\position: Added obeypunctuation code	84
\@additionalaffiliation: Added macro	65	\postcode: Added obeypunctuation code	84
\@mkbibcitation: Disabled linebreak	91	\state: Added obeypunctuation code	84
\@startsection: Added \tochangmeasure	43	\streetaddress: Added obeypunctuation code	84
Redefined macro	44		
\@textbottom: Redefined	50		
\acmMonth: The default now is the current month (Matteo Riondato)	67		

General: Added acmart-preload-hook	33	General: Added PACMHCI journal options	56
Added cmap and glyphtounicode	50	Added the possibility to adjust number of author boxes per row in conference formats	33
BibTeX comma before articleno bug corrected	33		
BibTeX crossref bug corrected	33	v1.37	
BibTeX numpages bug corrected	33	\description: Reduce list indentation (Matthew Fluet)	56
Documentation updates	33	\descriptionlabel: Reduce list indentation (Matthew Fluet)	56
Moved \citename definition for non-natbib bibliography, so a package may redefine it	46	\normalparindent: Set \normalparindent (Matthew Fluet)	49
Switched to Type 1 fonts for libertine even if OTF-capable engine is used (Kai Mindermann)	51	General: Reduce list indentation (Matthew Fluet)	55
firstpagestyle: Added right linecount for two-column formats	97	Set \normalparindent; Reduce list indentation (Matthew Fluet)	33
Added timestamp (Michael D. Adams)	97	v1.38	
standardpagestyle: Added right linecount for two-column formats	94	General: Increase default font size for SIGPLAN	33, 38
Added timestamp (Michael D. Adams)	94	v1.39	
v1.34		\@@authornotemark: Added macro	90
\@mkbibcitation: Deleted DOI from doi numbers	91	\authornotemark: Added macro	67
\ACM@linecount@bx: Rulers now are continuous	92	v1.40	
\ACM@linecountL: Rulers now are continuous	93	\@copyrightowner: Added new copyright version: licensedcagov	73
\ACM@linecountR: Rulers now are continuous	93	\@copyrightpermission: Added new copyright version: licensedcagov	74
\maketitle: Added date to the bibstrip in conf proceedings	77	\@mkauthors@i: Switched to MakeTextUppercase	86
Deleted 'DOI' from doi numbers	77	\@parfont: Switched to MakeTextUppercase	99
Rearranged bibstrip	77	\ACM@linecount@bx: Work around a bug in xcolor: looks like cmyk colors in boxes do not work	92
The \terms command is now obsolete	77	\ccdesc@parse@finish: Added macro	71
\terms: The \terms command now just produces a warning	68	\city: We now do not print this even in SIG	84
v1.35		\country: Fixed bugs with extra spaces	84
\bibstyle@acmauthoryear: Square brackets for author-year style	40	\l@section: Redefined macro	45
General: BibTeX bug fixed: et al.	33	\postcode: We now do not print this even in SIG	84
If the copyright is set to usgov or rightsretained, the price is suppressed	72	\state: We now do not print this even in SIG	84
v1.36		\streetaddress: We now do not print this even in SIG	84
\@ACM@authorsperrow: Added macro	70	General: Added 'textcase' package	39
\@mkauthors@iii: Added authorsperrow override	88	Added heightrounded to geometry	48
\@mkauthors@iv: Added authorsperrow override	89	Added new copyright version: licensedcagov	33
\if@ACM@authordraft: Corrected typo, thanks to bargteil	36	Added package cleveref	33

Added Ross Moore code for glyphtounicode	50	\ACM@linecount@bx: Rearranged the code to get rid of spurious underfull messages (Benjamin Byholm)	92
Bibliography changes	33	\author: Started counting authors . . .	64
v1.41		\authorsaddresses: Introduced macro	66
General: Added new badges	33	\country: Corrected spacing for institution	84
v1.42		\if@ACM@acmthm: Modified description	34
General: Deleted ACM badges	33	\liningnums: Workaround for compatibility with fontspec	51
v1.43		\maketitle: Added authors' addresses 'Thankses go before authors' addresses	77
\@startsection: Added		\num@author: Introduced macro . . .	64
\makeatletter	44	General: Added etoolbox	33
\country: Added comma before country for journals	84	Bst file bug fixes: label width is calculated correctly	33
v1.44		Delayed hypersetup since journal options may change screen mode . . .	46
\@acmBooktitle: Added macro	63	PACM now set screen to true	56
\@acmEditors: Added macro	63	Restore theorem defs to class file . .	33
\@editorsAbbrev: Added macro	63	v1.47	
\@folioblob: Suppress the blob if acmArticleSeq is empty	96	General: New journal: THRI	33
\@mkbibcitation: If the paper has just one page, use 'page' instead of 'pages'	91	v1.48	
\ACM@restore@pagestyle: Added macro	92	\@headfootfont: Deleted unnecessary switch (Michael D. Adams)	94
\acmArticle: The default is now empty	67	\@mkabstract: Removed spurious indentation if abstract is followed by an empty line	91
\acmArticleSeq: Now acmArticle might be empty	67	\ACM@timestamp: Formatting change (Michael D. Adams)	93
\acmBooktitle: Added macro	63	\if@ACM@review: Review mode now switches on folios	34
\editor: Added macro	63	\maketitle: Added acmart and version info to pdfcreator tag	77
\if@ACM@acmthm: Added macro	34	Added language and doctitle attributes to PDF (Andreas Reichinger)	77
\maketitle: Empty DOI or ISBN are not printed (by Michael Ekstrand) . .	77	Suppressed empty DOI (Serguei Mokhov)	77
General: Added package refcount . . .	33	General: \citeyear no longer behaves like \citeyearpar	46
Deleted package cleveref	33	Code prettying (Michael D. Adams) . .	33
Put theorem defs in a separate style . .	33	Initial support for Biblatex (Daniel Thomas)	33
v1.45		Misc entries in the bibliography no longer produce a separate date . . .	33
\@folioblob: Switched		Typos fixed (Jamie Davis)	33
\bfseries\sffamily to \sffamily\bfseries	96		
\@parfont: Switched			
\bfseries\sffamily to \sffamily\bfseries	99		
\@titlefont: Switched			
\bfseries\sffamily to \sffamily\bfseries	81		
v1.46			
\@mkauthorsaddresses: Introduced macro	90		
\@mkbibcitation: Added subtitle . . .	91		
\@printendtopmatter: Made it \par\bigskip uniformly	92		
\@printtopmatter: Deleted rule	80		
\@setauthorsaddresses: Introduced macro	92		

v1.50	\@copyrightpermission: New copyright statements for iw3c2w3[g]	74	\Description: Added macro	52
v1.51	General: Corrected the bug with price suppression	72	\acksname: Added macro (Philip Quinn)	104
	Suppress price if the copyright is set to iw3c2w3 or iw3c2w3g	72	\ccsdesc@parse: End the concepts list with a period (Philip Quinn)	71
	XeTeX now uses OTF fonts (Joachim Breitner)	51	\if@Description@present: Added macro	52
	firstpagestyle: We now use journal abbreviation for footers	97	\if@undescribed@images: Added macro	52
	standardpagestyle: We now use journal abbreviation for footers	94	General: Looks like XeTeX requires explicit monotype font declaration	51
v1.52	\@copyrightowner: Rewording of licenses	73	Make two-column layouts flush (Philip Quinn)	48
	\@copyrightpermission: Another rewording of copyright statements for iw3c2w3[g]	74	v1.57	
v1.53	General: Added PACMCGIT, TIOT, TDSCI	56	\ACM@origbaselinestretch: Added check whether the user changed \baselinestretch	106
v1.54	\@mkbibcitation: Bug corrected (Ross Moore)	91	\author: Added warning if \author has comma	64
	\@shortauthors: Added submission id in anonymous mode	94	\email: Added warning if \author has comma	66
	\ACM@NR@adjustedSectionformat: Added macro	98	\if@ACM@balance: Added macro	35
	\ACM@NRadjust: Added macro	98	\vspace: Added warning	106
	\ACM@adddotafter: Added macro	99	v1.58	
	\author: Added submission id in anonymous mode	64	\@dblfloat: Deleted spurious \vspace warning	54
	\if@ACM@nonacm: Added macro	35	\@marginfigure: Deleted spurious \vspace warning	54
	General: Added Ross's patch for sectioning	99	\@marginable: Deleted spurious \vspace warning	54
	Deleted indent for subsection	99	\@mkbibcitation: Deleted spurious \vspace warning	91
	XeTeX now uses T1 encoding	51	\@printendtopmatter: Deleted spurious \vspace warning	92
v1.55	\@mkbibcitation: Bug corrected	91	\@sidebar: Deleted spurious \vspace warning	53
	\maketitle: Fixes topnum	77	\@maketitle: Original \vspace inside \maketitle	77
	General: Now we use purple color for links	46	\vspace: Preserved old versions as \@vspace@orig and \@vspace@orig	106
	Table captions for SIGCHI now use the same font size as figure captions (Luis Leiva)	53	General: Added HEALTH. TDSCI is renamed to TDS	56
	Typo corrected (Zack Weinberg)	39	Suppressed \addtocounter in pdf subject	46
v1.56	\@marginfigure: Added checking for description	54	v1.59	
	\@mkteasers: Added check for description	90	\acmConference: Setting \@ACM@journal@bibstrip	63
			\acmJournal: Setting \@ACM@journal@bibstrip	63
			\if@ACM@journal@bibstrip: Introduced macro	37

firstpagestyle: Added logic for conference papers using journal format	97	\ccsdesc@parse: Use math right arrow in text	71
Moved page styles to \AtBeginDocument	97	General: No dots for unindented paragraphs	99
standardpagestyle: Added logic for conference papers using journal format	94	v1.71 \l@subsubsection: Bug fixed (thanks to Andrew Black)	45
Moved page styles to \AtBeginDocument	94	v1.72 \author: Added \detokenize (Kuldeep S. Meel)	64
v1.60 \headfootfont: Moved to footnotesize	94	\maketitle: Do not andify authors for pdf metadata (Scott Pakin) . . .	77
v1.61 \@typeset@author@bx: Added \normalbaselines	87	General: Added hyperxmp	46
v1.64 \ACM@linecount@bx: Bug fix: made the spacing on the left and the right size equal	92	v1.73 \@ACM@checkaffil: Added macro . .	86
\if@ACM@maketitle@typeset: Introduced macro	56	\@ACM@resetaffil: Added macro . .	86
\maketitle: Added a switch setting to show that \maketitle is typeset .	77	\@mkauthors@i: Check the presence of required elements for affiliations	86
v1.65 \@mkauthorsaddresses: Deleted cs@addpunct	90	\@mkauthors@iii: Check the presence of required elements for affiliations	88
v1.66 \@specialsection: Suppress warnings about \vspace	79	\@mkauthors@iv: Check the presence of required elements for affiliations	89
General: Patching algorithm and algorithm* to prevent spurious space warnings	52	\city: Check the presence in affil . .	84
v1.67 \@parfont: Deleted redefinitions of sections	99	\country: Check the presence in affil	84
\@specialsection: Paragraph inside group does not print its argument. Added a bugfix	79	\if@ACM@citypresent: Added macro	86
General: Patching lstlisting and lstlisting* to prevent spurious space warnings	52	\if@ACM@countrypresent: Added macro	86
v1.68 \@specialsection: Deleted grouping altogether	79	\if@ACM@instpresent: Added macro	86
General: New command for unindent paras	99	\institution: Check the presence in affil	84
v1.69 \@printendtopmatter: Deleted grouping	92	\maketitle: Do not check again the presense of address fields	77
\@specialsection: Changed dot to colon for sigplan	79	General: Patching minted and minted* to prevent spurious space warnings	52
\ACM@linecountR: Do not increase numbers in one column format . .	93	v1.74 General: Changed the order of font loading	51
		v1.75 \@ACM@checkaffil: Changed warning to error for country	86
		\@beginmaketitlehook: Introduced macro	77
		\AtBeginMaketitle: Introduced macro	77
		\maketitle: Added \@beginmaketitlehook	77
		v1.76 \author: Added code for orcid links .	64
		\if@ACM@pbalance: Added macro . .	35

\maketitle: Put \par inside group for keywords	77	\translatedsubtitle	82
\orcid: Added code for orcid links . .	66	\@mktitle@iii: Added \translatedtitle and \translatedsubtitle	83
General: Moved hyperxmp before hyperref, see https://github.com/borisveytsman/ acmart/issues/425	46	\@mktitle@iv: Added \translatedtitle and \translatedsubtitle	83
standardpagestyle: Fixed bug with no line numbers for nonacm	94	\@mktranslatedabstract: Added macro	91
v1.77		\@mktranslatedkeywords: Added macro	66
\@mkauthorsaddresses: New separator of institutions	90	\@translatedabstracts: Added macro	42
v1.78		\@translatedkeywords: Added macro	42
\@mkauthors@i: Unboxing \mktitle@bx	86	\@translatedsubtitle: Added macro	42
\@mkauthors@iii: Unboxing \mktitle@bx	88	\@translatedtitle: Added macro . .	42
\@mkteasers: Unboxing \mktitle@bx	90	\ACM@lang@check: Added macro . . .	42
\@printtopmatter: Added processing the overflowing title box	80	\ACM@languages: Introduced macro .	36
\@specialsection: Again suppressed \vspace warning	79	\maketitle: I13n	77
v1.82		\translatedkeywords: Added macro	42
\anon: Introduced macro	76	\translatedsubtitle: Added macro	42
v1.83		\translatedtitle: Added macro . .	42
\@mkabstract: I13n	91	General: Use babel for multilanguage papers	41
\@mktitle@i: Added \translatedtitle and		translatedabstract: Added macro	42

Index

Numbers written in *italic* refer to the page where the corresponding entry is described; numbers underlined refer to the code line of the definition; numbers in *roman* refer to the code lines where the entry is used.
